SCOTTS STILL HAVE FARM SEEDS

Hybrid Corn - The supply of early hybrid seed corn is about gone and later hybrids are being used up rapidly. We have been fortunate in having more seed of the popular hybrids than in past years, and on nearly every order have been able to furnish the variety selected.

Round kernels are being used much more widely. Generally they are as high in germination as flat kernels, produce as well and are graded uniformly. Special planter plates are usually required which can be used in future years. Scotts Hybrids are all treated and will produce vigorous, high yielding corn if soil and weather conditions are at all favorable.

Soybeans - It will be difficult to supply everyone with early maturing beans. However, there are a number of varieties from which a selection may be made.

RICHLAND: early, stiff stalked, satisfactory oil content, good yields on rich soil, grow short on thin soil.

MINGO: medium early, 3 to 5 days later than Richland, exceptionally high yielding, satisfactory oil content.

MANCHU: medium maturing, widely used but has never been considered a pure strain.

DUNFIELD: medium late, very high in oil content, satisfactory in production.

SCIOTO: late maturing, high in content and quality of oil, high yielding, good hay variety.

Processing plants are giving more attention to varieties because of variation in oil content, and more emphasis can be expected. Soybeans can be seeded at a lower rate per acre than is commonly done if germination is high. That is just another reason we have been so careful in selecting, testing and cleaning our seed beans.

Emergency Seedings - Winter damage to fall sown grains and last year's clover and grass seedings has been severe. Sudan grass, soybeans, millet or other emergency crops can be used to take the place of lost seedings.

Cover Crops - With increased acreages of corn and soybeans, winter cover crops increase in importance. Ryegrass has been widely used because of its extensive root system and its rapid growth; or alfalfa and clovers may be used. Seedings should be made immediately after the last corn plowing. Cover crops can also be used where soybeans are planted in rows. They give protection throughout the winter months, add humus, and in the case of legumes, nitrogen to the soil.

While the demand for Farm Seeds has been strong and seeds have moved freely, we have kept prices of Scotts Seed just as reasonable as possible. We can still take care of late orders on practically all seeds and can make immediate shipment.

Yours truly

O M SCOTT & SONS CO

Seed Price List

April 23, 1943

"SCOTT'S" grade is the highest quality seed available. It is carefully selected and thoroughly re-cleaned. Noxious weed free. May contain 0.10% to 0.15% other crop seed and in most cases will test 99.75% pure.

SPECIALS: The grades marked "Special" may be slightly off in appearance or contain one or two percent of other clovers or crop seed. This seed is clean and perfectly safe to sow.

Seed prices subject to prompt acceptance

RED CLOVER

Scotts Medium Red	\$21.00 bu.
Special Medium Red	20.00 bu.
Scotts Midland	24.50 bu.
Scotts Mammoth	20.00 bu.

Scioto (Late)	3.25 bu.

OPEN-POLLINATED CORN

Lancaster Sure Crop (Ensilage)	4.00 bu.
White Ensilage (Med. Late) ..	4.00 bu.
Blue Clarage (Med. Early)....	4.00 bu.

SWEET CORN

Stowell's Evergreen.....40c lb.

Scott's HYBRID SEED CORN

Scotts Hybrid Corn has been graded for width, length and thickness and will plant easily and accurately in any make of planter. It is treated for disease control and will produce those extra stalks which pay for the seed. The round kernel grade will produce just as well as the flat grade but special plates are usually required for accurate planting. These plates are available for most standard planters.
